Blackwell
Electronics

Data mining is the process of discovering patterns in large data sets involving methods at the intersection of machine learning, statistics, and database systems

Data analytics is the science of analyzing raw **data** in order to make conclusions about that information.

Many of the techniques and processes of **data analytics** have been automated into mechanical processes and algorithms that work over raw **data** for human consumption

KEY TAKEAWAYS

- **Takeaway #1:** Clean the data properly
- **Takeaway #2:** Train the algorithms
- **Takeaway #3:** Conduct peer review to ensure results has business sense

Future Applications

Data Mining and Machine Learning

SUPERVISED LEARNING

- ✓ **Classification:**
Customer retention
Fraud Detection
- ✓ **Regression:**
Forecasting
Predictions
New Insights

UNSUPERVISED LEARNING

- ✓ **Dimensionally:**
Big Data Visualization
- ✓ **Clustering:**
Recommend systems
Targetted Marketing
Customer Segmentation

REINFORCEMENT LEARNING

- ✓ Real time decisions
- ✓ Learning Tasks

DATA MINING

- **Reduce Cost:**
Discover patterns
- **Improve Sales:**
Develop new
strategies
- **Improve Customer
Satisfaction:**
Data to define
customer advocacy
strategies
